

# SCIENCE AND TECHNOLOGY

As part of our extensive portfolio, Findorff has proudly completed over one million square feet in the last 10 years alone for clients ranging from specialized science-based organizations and technological enterprises to numerous educational institutions and industrial operations.

In an industry driven by speed-to-market and high-quality performance metrics, Findorff's knowledge in highly-regulated and complex environments makes us a valued and effective partner to various science-and-technology-based clients. Our focused expertise, accompanied by leading preconstruction, construction, and post-construction services, has proudly earned us a reputable foundation throughout the Midwest.

Findorff's services additionally guide clients in the planning, budgeting, and construction of specialized spaces including: cGMP manufacturing facilities, ISO classified clean rooms BSL labs, and pilot plants. By collaborating with project owners and employing innovative building solutions, Findorff is also able to support the scaling of various manufacturing processes as well as the logistics, safety, procurement, commissioning and scheduling activities necessary to ensure quality craftsmanship.
